## SAFETY WARNINGS

Always support the vehicle with jack stands before working underneath

- Use only the parts supplied by ipd to install this kit
- Check ALL the fasteners for tightness before and after road testing the vehicle
- Do not use air impact wrench when re-installing bolts as stripped threads may result

# INSTALLATION

- 1 Remove the old exhaust system all the way forward to the resonator (first muffler). The straight high flow adapter will replace the resonator on the new system. Remove the two cups that the front O-ring mounts were suspended from (there is a bolt through the center of each) and discard them.

- 2 Assemble the new system on the car only snugging the clamps. If your car's rear wheels are off the ground you may have problems with the axle pipe clearing the sway bar. This is normal and will not be a problem when the car is on the ground.
- 3 Adjust the system paying careful attention to clearances that could cause rattles later (such as the tailpipe banging on the muffler when you shut the car off). When you feel the system is positioned well then start at the front and tighten all the clamps.
- 4 Set the car down and check clearances again, then start the car up and check for leaks. It is not uncommon to have trouble sealing a union between an old pipe and a new one so feel free to use high temp silicone sealant if you have a problem.
